Inspiring People Saving Oceans

Nusa Penida Field Officer

About

The Coral Triangle Center (CTC) is a foundation based in Indonesia that trains marine resources managers and educates all groups that interact with coastlines and reefs within the Coral Triangle. The applied training and learning programs are adaptive, innovative and customized for different stakeholders to abate threats, address constraints and promote sustainable practices. Coral Triangle Center provides training in marine natural resources management, supports marine protected areas, coordinates a learning network of Marine Protected Area practitioners, connects the public and private sector on coastal issues, and is developing a learning center of excellence in tropical marine conservation. Check our website at www.coraltrianglecenter.org.

Our field learning sites provide an ideal setting for implementing cutting-edge conservation management on-the-ground. We support our partner MPA sites to become exemplar models of sustainable management where wider practitioners from across the region can trial the lessons they have learned, observe, learn, and gain field experiences necessary for becoming excellent guardians of our seas.

To date we are working with two learning sites in Indonesia ([Nusa Penida MPA](#) and the [Banda Islands MPA network](#)). We are supporting government partners, community groups and local organizations at these sites to design, develop and establish successful MPAs that showcase effective management, and become on-ground training platforms for wider practitioners and stakeholders from across the region.

By 2019, we are aiming to widen our field learning activities to a total of nine sites, including at least one for each Coral Triangle country. Each site will have a different learning focus. Participants can learn from MPAs with different ecological, economic, social, and geopolitical characteristics.

Essential Functions

The Coral Triangle Center (CTC) Nusa Penida Field Officer (NPFO) is an entry level position that is responsible for assisting Nusa Penida Project Leader on day to day operational program of Nusa Penida marine protected area (MPA) learning site. NPFO will maintain good relationship between CTC and local community, MPA key stakeholders, and partners in Nusa Penida MPA such as local government, MPA Management Unit, dive operators, and other identified community organization.

S(he) will conduct regular awareness activities about marine conservation and its benefit to local community in Nusa Penida, bridging communication with CTC Center for Marine Conservation Outreach works, and accelerate the process for strengthening MPA management to reach higher effectiveness level. NPFO will coordinate and work closely with local government in the process of synchronization of their programs with CTC Program.

NPFO will support Nusa Penida Project Leader in regularly collecting data and information on biophysics, socioeconomics, and governance aspects of Nusa Penida management referring to Indonesia Management Effectiveness Evaluation Framework of Marine Protected Area, Coastal, and Small Islands (EKKP3K) standard. S(he) will support programmatic team in organizing and delivering field training to target communities and other potential partners in Nusa Penida.

S(he) will provide administrative support on travel and logistic needs in the field as well as other related works as requested.

Knowledge/Skills:

- Bachelor degree in natural resources management, marine conservation or fisheries management, social science or related subjects with at least 2 years of experience working in marine conservation, community development or other related fields.
- SCUBA Diver with minimum at least 20 log dives.
- Proven skills on facilitation works, community organizing, and community involvement projects.
- Proven participation as teaching assistant or laboratory support assistant with ability to facilitate learning will be a plus.
- Familiar with mapping software (ArcGIS or QGIS) is an advantage
- Have adequate knowledge on legal framework related to marine resources conservation and management.
- Good communications and interpersonal skills.
- Trustworthy, attention to detail with high degree of accuracy and organized in work.
- Ability to develop basic technical report on projects running on the ground and to write up short story from the field for communications purpose.
- Willing to be placed in designated duty station.
- Ability to meet set target and work independently with minimum supervision.
- Intermediate level of English proficiency both writing and speaking.
- Proficiency with basic word processing, data entry and basic analysis, and presentation software.

The position will be based in Bali. Evening and weekend work to achieve program goals may be required.

CTC is an equal opportunity employer
